Abstract (en)
[origin: FR2776920A1] The invention concerns a vacuum massaging device consisting of a mobile head comprising a contact base (3) designed to be applied on the skin whereon is mounted a vacuum chamber (2) connected by a flexible conduit (6) to a suction system, the base having a concave lower surface forming a lifting chamber (8) and comprising an elongated suction nozzle (4) vertically passing through it communicating the vacuum chamber with the skin surface so as to produce a skin fold moving with the head. Said invention concerns the manufacture and distribution of appliances and accessories designed for medical or paramedical surgery equipment or hospital services performing massage.
