Abstract (en)

[origin: WO9836771A1] A method for identifying the repertoire of proteins exposed on the surface of a virus, bacterium or cell, and to the preparation of vaccines thereto. The method includes vectorially labelling proteins on the membrane surface; isolating the labelled membrane surface proteins by two dimensional gel electrophoresis; and sequencing the isolated membrane surface proteins. Also included are methods of producing a vaccine against the virus, bacterium or cell, methods of detecting infertility, methods of producing contraception and the vaccines and contraceptives produced by the methods.
