Abstract (en)

[origin: WO9855278A1] The invention relates to a device for cross-perforating a moving paper strip (1) enabling selected perforation holes to be made in the paper strip as it moves (1). This is achieved by providing a perforating cylinder (2) in two cylinders (2, 3) which can be placed on the paper strip. Said perforating cylinder has interspaced retractable punch stamps (19) forming a helicoidal line on its circumference.
