Abstract (en)
[origin: FR2764261A1] The invention concerns a garage for cycles such as bicycles or scooters comprising a polyhedral container with a front surface (6) capable of being opened by insertion of a credit means. The container comprises a floor for detecting objects contained in the garage, and optionally sensors characterising said contents. It also comprises a ceiling (5) whereof the resistance is locally reduced so as to collapse at this point and in channelling the effects of possible deflagration. Finally, it can comprise a mobile internal plate supporting the cycle and driven in translation outwards through the door opening, to facilitate the removal of the cycle.
