Abstract (en)
[origin: WO9856016A1] The invention relates to a extra-flat miniaturized inductive component comprising a magnetic core (5) made of a soft magnetic material, a substrate (1) with conductor strips (6) and through connections. The conductor strips (6) and connections running through the substrate (1) form part of the coils of a winding. The other part of the winding is formed by wires on the upper surface (3) of the substrate (1) which are bonded to metal pads (8) on the ends (7) of the conductor strips (6).
