Abstract (en)
[origin: WO9849817A1] The present invention relates to a method, a network and two nodes for giving a subscriber permanent or temporary access to a service which he, consciously or unconsciously is in need of. This is solved through introducing a method in the telephone network which registers the subscriber for the service he is in need of and thus gives him access to the service. In a more detailed manner the problem is solved in that the service which the subscriber has tried to use registers the attempt and that the subscriber does not have access to the service and activates a registration function. The registration function uses resources available in the network to inform the subscriber that he, in order to be able to perform the service wanted by him, has to register and possibly pay a fee and asks the subscriber if he is willing to do so.
