Abstract (en)

[origin: DE19842970C1] The method of forming a fence post involves forming a hollow body by extrusion, into which a ceramic infill is pressed. Following forming of the base, the walls of the post body are formed, as the ceramic mass is fed into the base form piece and the base. During the operation fluid is fed into the interior of the body. The claims include a machine for forming the post.
