Abstract (en)

The present invention provides a device for securing one or more roof covering elements on a roof construction, comprising: a hook-shaped part (10-13) for engaging on an edge of a roof covering element; a body part which connects onto the hook part and which is provided with a resilient piece (14); and a fixing part (16) which extends substantially transversely of the body part and which is provided with a backward pointing piercing part for fixing in a component of the roof construction.
