Abstract (en)

[origin: EP0987628A2] A vehicle control computer system uses JavaBeans TM to implement device interfaces. A vehicle control center, having a processor and memory, provides user access to devices operating within the vehicle. The manufacturer of such devices provides a JavaBean TM interface stored with the device. When a device is installed in the vehicle, the processor or other control element of the vehicle control center becomes aware of the installation and requests or otherwise receives the stored JavaBean TM interface from the device. A data structure is used to maintain information about interfaces for devices. The vehicle control center can then use the interface as received or replace it with a different interface already stored in memory by changing the contents of the data structure.
