Abstract (en)

[origin: EP0987664A2] The method involves storing at least one data record with selection parameters determined according to selection criteria (3) entered by a user at any terminal (2). The traffic information to be sent from the traffic information center (1) to a terminal is selected from the information present in the center according to the selection parameters specified in the stored data record. An Independent claim is also included for a traffic information center, esp. for implementing the method.
