Abstract (en)
[origin: EP0987922A2] The multi-resonance plate has a unit containing a core layer (11) and two covering layers (12.1,12.2). The covering layers are connected to opposing surfaces of the core layer. A frame (15) encloses the unit so as to leave an air volume (16). A suspension (17) connects the unit to the frame, enclosing the air volume. At least one electromagnetic driver acts on the unit. The entire drive electronic arrangement, which contains an output amplifier optimized for the particular driver, is integrated into the enclosed air volume.
