Abstract (en)

[origin: WO9856275A1] The invention concerns a manual dispenser of thermofusible dispenser, in particular depilatory wax, comprising a housing (10) forming a manual holding element, wherein is arranged a reservoir (15) or chamber containing granular thermofusible substance or in the form of a loaf (5), said reservoir being completed with means (30, 32, 34) to move forward the thermofusible substance towards a heating grid (20) provided in said reservoir outlet surface. The invention is characterised in that, the dispenser comprises electromechanical means (22, 45, 47, 48) interrupting the heating grid (20) power supply when the forward movement pressure of the thermofusible substance towards the grid is less than a minimum predetermined value, said means being arranged such that the effect of their action on the grid (20) is located substantially at the centre thereof.
