Abstract (en)
[origin: WO9943241A3] The invention relates to a presentation container for forward feed devices for goods packages stacked one behind the other in rows. The inventive presentation container enables optimal flow and handling of the goods in terms of cost and time as well as placement optimisation and the greatest possible use of space. To this end, the presentation container (1) has a recess (2) in its back wall (4) whose dimensions are at least equivalent to those of a goods slide (3) of a forward feed device (6).
