Abstract (en)
[origin: DE19724272A1] The invention relates to a vehicle, especially a vehicle for a fairground ride, comprising an undercarriage (3), said undercarriage being guided in a track (8) and a top carriage (2) which is arranged on said undercarriage (3), and which is able to turn in relation thereto. A damping device (9) is provided for damping the relative rotations between the top carriage and the undercarriage. The invention is characterised in that said damping device (9) is configured as a centrifugal brake and/or in that a stopping and/or alignment system (10, 11) is provided, said stopping and/or alignment system being controlled by the track (8). The stopping and/or alignment system blocks or allows the top carriage (2) to turn in relation to undercarriage and/or aligns the top carriage (2) in relation to the undercarriage (3).
