Abstract (en)  
[origin: WO9856999A1] The invention relates to a displaceable cabin (1) for forming a space with an adaptable function, comprising a floor construction (2), a roof construction (3), a frame connecting the floor construction (2) to the roof construction (3) and wall elements (6) fixed to the frame, wherein the wall elements (6) are each individually removable from the frame without damaging the remaining construction. Damage is prevented as a result of these measures, wherein the removability leads to a quick, simple conversion. According to a preferred embodiment, at least a part of the number of wall elements (6) can be removed toward the outside. This measure facilitates conversion since the wall elements (6) can be supplied and carried away from the outside. According to another preferred embodiment the removable wall elements (6) each comprise an inner panel and an outer panel at least on their edges and, after removal of the inner panel, the wall elements are removable toward the inside. This measure makes it possible to remove and arrange wallelements when the outside of the cabin (1) is not accessible.
