Abstract (en)
[origin: WO9858431A1] The invention relates to an overhead line conductor, particularly to a sheathed conductor (1) comprising at least one ridge part (5) on the surface of the conductor for damping conductor (1) vibration generated by formation of turbulence caused by side wind. To enable a quicker manufacturing process, the ridge part (5) is a part of varying height in the longitudinal direction of the conductor (1).
