Abstract (en)

[origin: FR2764460A1] The invention concerns a method for the dynamic management of a prepaid terminal subscription data in a telecommunication network, whereby the client possessing such a terminal, acquires two numbers, and whereby, on first accessing the network from this terminal, the following two steps are carried out: requesting remote customisation from said terminal by inputting the first number followed by the network uploading an identity for identifying the latter; calling the network server from the terminal which indicates its identity and dialling by the user of the second number, followed, if authentication is correct, by the network sending to the terminal a voice memo indicating the call number associated with said terminal and the credit balance.
