Abstract (en)

[origin: EP0989358A2] A rail section element and a connector element (1) pushed into it have a U-shaped cross section with a base section and side leg sections (11) with inside guide elements. As the connector element is pushed in, these guide elements feed in the side leg sections into the rail section element in such a way that a connector clip (15) fitted to the base section side presses against the connector element side.
