Abstract (en)
The apparatus consists of two interacting devices of which the device A, to be stable put ont eh child body, provides a code limited power transmitter transmitting in continuous impulses to a second device B, kept by the locking after person, provides a receiver with the same code to be put in stand-by by the receivment of the same impulses. When the receivment of said impulses comes to stop owing to the exit of the receiver B from the radius of action of the transmitter A caused by the taking away of the child beyond an arranged safety limit, a sound signal and/or light signal starts so alerting the looking after person.
