Abstract (en)

A receiver for digital audio broadcast in which plural programs and data of character sequences indicating broadcast stations are broadcasted through one transmission frequency band, including a past record table with which when the digital audio broadcast is received, the data of the reception frequency thereof and the data of the character sequence thereof are paired and registered, and a display element for displaying a list of the character sequences indicating the broadcast stations on the basis of the data of the past record table, wherein when one of the character sequences in the list displayed on the display element is selected, the broadcast is selected and received on the basis of the reception frequency data corresponding to the character sequence. <IMAGE>
