Abstract (en)  
[origin: EP0990584A1] The marine anchor comprises two coplanar flukes (1,2) either side the shank (3). The fluke points extend to the free front end of the shank on which the anchor chain is fixed. The fluke heels (4) are connected to a rectangular tubular section (5) forming part of a heavy rocker (6) and to a rod (7) passing perpendicularly through the section. These constitute an assembly in which the rear end (8) of the shank can articulate around the rod. The heavy rocker comprises a set of tie rods (12,13) and struts (14) forming the edges of a pyramid structure (15) leaving totally free spaces (16,17) between the tubular section and the rear ends (18,19) of the structure.
