Abstract (en)

[origin: EP0990610A1] The device includes means for engaging behind the edges (4,5) of the sheets in the delivery drum (A) and feeding them to the clamping device (48). These means have a guide arm (7) mounted movable on the first opening drum (B) so that to engage behind the edges as the first drum rotates it moves from a retracted position into a position protruding over the circumference (27) of the first drum (B). The guide arm is mounted for swivel movement on the first drum at a distance from the rotary axis (11) of same
