Abstract (en)  
[origin: EP0990740A1] In a display controller for a construction machine which allows more room for a cab to enable an improved working efficiency of the operator, a plurality of control units 20, 22, 25 controls the respective operations of various parts of the construction machine based on information collected from detecting means provided in the individual construction machine part, and a display unit 26 displays the respective operation states of the individual construction machine parts, the display unit being connected to the individual control unit with a common communication line 30. The display unit 26 includes inputting means 28 for inputting commands to change display information representing the operation states of the individual construction machine parts, and displaying means 27, 29 for reading from the individual control units the display information corresponding to the inputted commands and displaying the read display information. <IMAGE>
