Abstract (en)

[origin: EP0990845A2] The burner deck is provided with rows of outflow apertures (18) for fuel - air mixture and between the rows run cooling channels (20). The burner deck is composed of two plate formations, of which the one is provided with outflow apertures and the other with recesses (48) which do not obstruct flow. The cooling channels are formed by local formations of at least one of the two plates. Preferably the combustion zones have strips (42) made of high temperature-resistant ferritic refined steel.
