Abstract (en)
[origin: WO9900102A1] The invention relates to a feeding bottle comprising a container (1) which is open at both ends and receives flexible disposable bags (11) into which food in liquid form is filled. The bags are introduced from the side (arrows 14) through the longitudinal slot (3) and turned over at the top. A holding ring (15) is slid over the bag edge from above and fastened to the container by means of a snap-in connection so that the bag can be filled with the liquid food more rapidly, comfortably and securely than before.
