Abstract (en)
[origin: WO9858695A1] A monodose disposable inhaling device is disclosed which is suitable for delivery, via the respiratory tract, therapeutic medication, which includes among its objects and advantages increased convenience in medication with dry medicaments in powder form, especially with respect to accuracy of dosage and accurate placement of the drug. In one embodiment the inhaler device generally consists of a body member having a delivery portion constructed integral with a housing portion, a button member, a spring member and a spring and capsule support member. Additionally, a screen member can be disposed within the body member at the intersection of the delivery portion and the housing portion.
