Abstract (en)

[origin: WO9858026A1] The invention concerns a transparent pigmentary composition for preparing ink characterised in that it is obtained by coupling with acetylaceto-2-anisidide a mixture of diazonium salts obtained from 98 to 85 mol % of 2- methoxy-4-nitro-aniline and 2 to 15 mol % of 4-chloro-2-nitro-aniline. The invention also concerns a method for preparing such a composition and their uses in printing inks or as pigmentary concentrates for making printing ink.
