Abstract (en)
[origin: DE19726706A1] The invention relates to a paste container with a follower plate (2) tightly sealing the open side of the container. A multiblade mixing propeller (4) is fitted to the follower plate in such a way that it can be rotated, a short distance beneath the follower plate (2), around an axle (5) which juts through the middle of said plate. The paste container has a removal device (6) with an external drive mechanism (8), with which paste (12) can be removed from the container (1) through an opening in the follower plate (2). The agitator blades (4) and the removal device (6) have the same driving mechanism (8). The paste container is used in particular for receiving thixotropic pastes.
