Abstract (en)
[origin: EP0992293A1] The sifting device has a cylindrical housing (1) containing at least one circular sieve (2), for sorting the loose material delivered via an input on one side of the sieve. The latter has different ring segments (2.1.1,2.1.2) with different characteristics for separation of the loose material into coarse medium and fine components which are delivered via respective outputs (1.3,1.4,1.5).
