Abstract (en)
[origin: EP0992630A2] The scraper blade is adjusted for normal operation by two hydraulic rams (4,5) and by a parallel support linkage. One of the support elements comprises a flat plate (2) which is split by a line (14) parallel to one end, into two sections linked by a pivot (11) to allow relative settings between the two sections. This effectively tilts the scraper blade in either direction.
