Abstract (en)

An automatic-release device for closing door or window wings and the like, comprising a locking bolt (7) which is slideable inside an enclosure (2) which is fixed in the stile of the sash of the wing and is insertable in a slot (F) formed in the corresponding rail of the window, elastic means (16) for retracting the bolt (7) from the slot (F) and manually-actuated retention means (13) which are accommodated in a seat (4) of the enclosure (2) and are suitable to retain the bolt (7) in a position for insertion in the slot (F) and to allow its disengagement from the slot by means of the elastic retraction means (16). <IMAGE>
