Abstract (en)

[origin: EP0993012A1] The enclosed resistance mounting has multiple stacked resistance sections (1) aligned on an axis (D) and an applied compression force. The compression force is applied to an outer rigid tube (2) with the stacked resistor floating internally and a central piece (9). A spring force (12) is applied from a fixed section (1) on the outer enclosure wall. The tubular resistive section is held between two positions by an end stop (14) on the moving section and static tube section.
