Abstract (en)

Insulation and cooling material for high-voltage supply devices is a composite of at least one thermoplastic polymer and of at least one particulate ceramic filler so that the material has a thermal conductivity of at least 0.9 W/M.K. The thermoplastic polymer may be polypropylenes, poly(etherimides), poly(phenylsulphides) and poly(etherimide)/poly(phenyl-sulphide) mixtures. The particulate ceramic fillers may be alumina, aluminum nitride, boron nitride, barium sulphate and beryllium oxide and mixtures thereof. The high-voltage supply device is intended for X-ray tubes.
