Abstract (en)
[origin: WO9901186A1] The invention relates to planks used for sliding on snow, having a central part (1) situated between a lower and upper flange. The central part (1) contains areas (11, 13) made of light materials and areas (12.1, 12.2,..., 14, 15) made of reinforcing materials. As a result, the board has the following properties: low empty weight, high transversal strength and high resistance to pressure.
