Abstract (en)  
[origin: DE19829076A1] The perambulator etc. has one or more wheels (20) to which a push handle (24) is joined, together with accommodation (34) for the person transported. The axle (22) of the wheel is coupled by a hinge to the handle. The hinge can have a torsion spindle fixed to the axle, and to which the handle is fixed, the angle included by the axle and spindle being less or greater than 90 deg. The spindle can be enclosed by a housing, one half of which is fixed to the axle and the other to the handle and spindle, the halves turning in relation to each other. The housing can be spherical, oval or polygonal, or can be formed by several plates.
