Abstract (en)
[origin: FR2764886A1] The invention concerns a method for displacing, at least partially, an aniline from its chlorhydrate, characterised in that said aniline is selected among anilines whereof the conjugate acid has a pKa not more than 6 and in that it consists in a step wherein it is subjected at a temperature not less than about 50 DEG C, advantageously about 70 DEG C to a reaction medium containing said chlorhydrate at least partially dissolved in a weakly polar solvent. The invention is applicable to organic synthesis.
