Abstract (en)
[origin: EP0993887A2] The separator (16) is used to separate the stack of punched metal sheets (8,8a) comprises two or more wedge components (17) designed to be driven into the stack at a given height, in a direction essentially at right angles to the length axis (22) of the shaft on which the sheets are stacked. An Independent claim is also included for a punching and stacking method using this machine.
