Abstract (en)

[origin: EP0994254A2] A bracket is provided as a fitting member for attaching a connector to a housing of a compressor. The bracket includes a base portion, a center portion, a support portion and a hold portion. A connector can be attached to the support portion. The base portion of the bracket is attached to the housing by a bolt, which passes through a bolt hole in the base portion and is engaged in a threaded hole in the housing. In this instance, the base portion, the center portion and the hold portion come into contact and engage with the outer surfaces of the housing, thereby positioning error can be prevented. <IMAGE>
