Abstract (en)

The present invention relates to the sector of gas-operated infrared-ray heaters, comprising a flat heating surface (2) located at the end of a cantilever arm (3) supported by a support arm (4). The position of the heating surface (2) may be varied between a high position (3a) in which the heating surface is substantially horizontal, a low position (3b), a position in which the heating surface is directed upwards and a stowed-away position (3c) via means (5) for directing the cantilever arm (3), comprising an intermediate articulation (6) and a hinged joint (7) between the cantilever arm (3) and the support arm (4). <IMAGE>
