Abstract (en)
[origin: EP0994314A2] A central heating radiator has the inlet and outlet connections (14a,14b) at the bottom and is connected to the supply and return feeds (26,28) of the central heating system by two flexible hoses. The hoses are looped to position part of each loop higher than the inlet/outlet to the radiator. This prevents residual water leaking out of the radiator when it is removed for maintenance. The plastic hoses are connected to the radiator, and to the system, by compression fittings.
