Abstract (en)
[origin: WO9902798A1] For sealed connection of a skylight window to a frame structure (1) of the kind wherein in an inner edge side of each frame member, a longitudinal mounting groove (9) is arranged for an internal vapour barrier membrane (4) in an underroof structure, a collar-shaped attachment device is procured. The attachment device is designed as a whole collar (11) of welded attachment elements (12-15) of flexible webs of a material with vapour barrier properties corresponding to the vapour barrier membrane (4). Press-in pieces (18, 19) of a relatively stiffer material are fastened to a strip-shaped zone (16) parallel to and in short distance from the inner side edges (17) of the attachment elements (12-15), for pressing-in of said zone (16) into the grooves (9) of the frame structure (1). To each corner between the mutually adjoining attachment elements (12-15) there are used two angular press-in pieces (19) fastened to said zone (11) in each of the two elements.
