Abstract (en)

[origin: WO9841724A1] The invention relates to a spacer element for supporting and positioning sheet units, preferably glass packages in windows, doors or other structure elements, and having a sheet formed extension with means for cooperating towards a sheet unit and/or a structure element surrounding said sheet unit. Said means comprises at least one deformable supporting element (1), which is yieldably suspended in at least one place (3) to at least one aperture (7) made in the extension of the spacer element and said supporting element (1) comprises at least one extension (10) for transferring pressure and friction against adjacent sheet unit and structure element, respectively.
