Abstract (en)

[origin: EP0995551A2] The tool has a pistol-like housing with a handgrip at the rear with a tool spindle leading to a tool holder. The axle of a motor for driving the spindle extends transversely and is coupled to it via an angled gearbox (10,14). The motor is mounted in a housing section in front of the grip. The angled gearbox is arranged between a gearbox (20,31) and a torque adjuster (57). An Independent claim is also included for an arrangement for implementing the method.
