Abstract (en)

The present invention relates to a method for obtaining packages for food products, particularly dairy products, which initially entails unwinding from a roll (1) and cutting a sheet (2) of heat-sealable material whose longitudinal and transverse dimensions allow the subsequent wrapping of the product (3). The method then provides for arranging the longitudinal flaps (4a,4b) mutually adjacent, so as to produce an overlap, and folding them laterally. This is followed by the arrangement of the ends (6a,6b) that protrude longitudinally beyond the dimensions of the product so that they are mutually adjacent and overlap. Then the ends and the longitudinal flaps are closed by heat sealing. Finally, the ends can be cut and/or shaped.
