Abstract (en)

[origin: EP0995827A2] Process to treat tubular textiles completely in one work process comprises determining distribution and position angle of products through product diameter. The distribution (2) and position angle (3) of the products are determined through the product diameter. On the basis of the angle, the aggregate rows (9,10; 13,14) of the planes (8,12) are arrangement symmetrically in themselves and asymmetrically in relation to each other.
