Abstract (en)

[origin: EP0995838A2] The input of the drive unit (8) is in drive connection with a vehicle running wheel (9) or an axle or shaft connected with it. A torque support (19) connected with the drive unit (8) supports on the additional apparatus (3). The torque support at both ends is provided with an articulated connection and is adjustable in its length. The torque support (19) has a telescopically alterable length corresponding to the spring path of the rear axle and at least one connection is formed as a ball joint (18).
