Abstract (en)  
[origin: EP0995880A2] The turbine blade (1) has a protective coating (10) of porous intermetallic felt. The blade body has internal cooling air channels (13), which open into the felt to supply it with cooling air. The felt is located in a front (4) or rear edge (5) of the blade, and is contained within a recessed aperture, so that its aligned with the neighboring parts of the blade. The felt is formed from compressed sintered intermetallic fibers on iron or nickel base. The fibers may have an anti-corrosion and/or heat protection coating.
