Abstract (en)

[origin: DE19830481A1] The cutter blade has a centre opening for fitting on a cutter holder. Spring arms (18) are formed in an area of the cutter blade between the centre opening and cutting edge (11) through incisions (14,15) which pass through the material thickness of the blade. The incisions and the spring arms extend in a circumferential direction of the blade. The incisions can be provided on several circumferential lines at different radii, and can be off-set relative to each other.
