Abstract (en)
[origin: WO9848384A2] The invention relates to an automatic machine (1) for dispensing objects (rolls of coins (3)), especially money, comprising at least one magazine (2) for stocking up the objects (3) and at least one dispensing device for dispensing the objects (3) from the at least one magazine (2). A receiving device (6) which is able to travel, preferably up and down, is provided inside the dispensing device (1), the at least one magazine (2) being positioned with its take-out end (13) close to the travel path of said receiving device. An object (3) can thus be dispensed from the magazine (2) into the receiving device (6) via the at least one dispensing device when the receiving device (6) is positioned in the area of the take-out end of the magazine (2). The receiving device (6) is provided with at least one take-out device (18) as a dispensing device. This take-out device (18) runs out to engage with the object to be removed (3), so that when the receiving device (6) passes by the at least one magazine (2), said take-out device (18) is able to take an object (3) from said magazine (2), preferably by lifting.
