Abstract (en)

[origin: WO9901854A1] A method and a device for producing three-dimensional physical reproductions from a scan data collection comprising a three-dimensional representation of a scanned area or object, which scan data collection has been obtained by using a remote sensing technique. The scan data of the scan data collection are processed into suitable control data for controlling a processor-controlled machining device for the purpose of producing a three-dimensional physical reproduction associated with the scanned area or object.
